Allowable Subject Matter

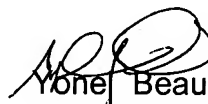

Claims 1 – 9 are allowed. The prior art of record fail to teach a rollover control method and system comprising, among other limitations, processing detected steering angle and wheel RPM by a vehicle dynamical equation, thereby calculating, inclusively, a longitudinal velocity, a lateral velocity, a yaw rate, a roll rate, a roll angle, a slip angle and a slip ratio; predicting a slip angle transiently generated while the yaw rate, the roll rate, the roll angle, a detected vehicle speed *and* the values calculated using the vehicle dynamic equation are processed by a filter in order to perform a rollover decision subroutine based upon predicted lateral velocity generated from the filter.
